

Unlocking systems
to end homelessness

BRISBANE ZERO

The Brisbane Zero campaign is a community based project to build public support for ending homelessness.

Brisbane Zero aims to know people who are sleeping rough by name, helping us make visible those who are often unseen. Our goal is for homelessness to be rare, brief, and non-recurring.

Brisbane Zero acknowledges and pays respect to the traditional custodians of the Greater Brisbane area: the Turrbal people, the Jagera people, the Ugarabul people, the Yuggera people and the Elders both past and present on whose land we walk, work and live. We recognise that sovereignty of their land was never ceded.

Brisbane Zero is supported by the Ellen Whitty Fund and Queensland Department of Housing.

Vulnerability Index Service Prioritisation Decision Assistance Tool (VI-SPDAT)

2022-23 Financial Year Report

Vulnerability Index Service Prioritisation Decision Assistance Tool (VI-SPDAT)

The **VI-SPDAT** is a screening tool used to identify the needs of a person or family with children experiencing homelessness. It helps match them with appropriate support services and housing options using a Housing First Framework.

The tool provides a score indicating the level of acuity (vulnerability) of a person or family. Using self-disclosed information collected and shared with their consent, we can understand their homeless history, housing, health, and support needs, which can be used alongside service coordination. This assists services to match housing vacancies with the needs of potential tenants, and to provide referrals for services and healthcare.

Individual Adults

This data provides a snapshot of individual adults surveyed using the VI-SPDAT by participating Brisbane Zero Regional Members during the 2022-23 financial year. Out of the **2,072** individuals on the Know By-Name List, **325** consented to being surveyed.

Vulnerability Levels

The VI-SPDAT enables support needs to be determined using an acuity scale, identifying the kind of housing and support people require to live more safe, stable and productive lives.

- 80% need Supportive Housing: safe, stable, and affordable housing with embedded healthcare, community and other support services.
- 18% need access to safe, stable, and affordable housing with short-term support services.
- 2% need access to safe, stable, and affordable housing.

Health Needs Snapshot (n=325)

People experiencing homelessness have high levels of health vulnerability in comparison with the Australian general population.

The following data represents the complexity of the health needs of the 325 Brisbane Zero individuals surveyed.
